

YOSHIKAWA

Cook-Pal Ren | Premium Carbon Steel Cookware

Forged In Japan · Built For Professionals

- ◆ Nitrided for 5× the hardness of standard carbon steel
- ◆ Natural non-stick microporous surface — no coatings
- ◆ Compatible with all cooktops including induction
- ◆ A lifetime investment in professional cookware

About the Cook-Pal Ren Series

The Yoshikawa Cook-Pal Ren series represents the pinnacle of Japanese carbon steel cookware, manufactured in Japan using a proprietary high-temperature nitriding process that makes the surface five times harder than conventional carbon steel. The result is cookware that resists rust, seasons naturally, and performs at the highest professional level for decades with minimal maintenance.

Suitable for all cooking environments — from home kitchens to professional restaurant lines, the Cook-Pal Ren range is compatible with gas, electric, and induction cooktops. A microporous surface absorbs oil over time to create a naturally non-stick finish, free from synthetic coatings. Each piece is a lifetime investment in superior cooking.
